

CLOSING THE FUNDING GAP

For many communities funds are limited, resources are uncertain or scarce, and the dynamic economic climate can deter their ability to address system deficiencies. From safety upgrades to routine maintenance, infrastructure improvements are costly. We understand the struggle municipalities face with constrained financial resources and have worked with hundreds of communities to procure outside funding for transportation and utility infrastructure.

Our multidisciplinary funding professionals provide assistance to help you meet budget objectives and strategic goals. Utilizing methods tailored to your specific project needs, we'll help your project take shape through the process of funding preparation and procurement.

BALANCE OF VISION & DRIVE

Working together, we'll find a way to make your vision a reality. Our team is driven to improve quality of life through infrastructure improvements. Challenges inspired us and we take great pride in working towards solutions with our clients.

We'll strategically position your project to acquire funding and financing with expedited implementation in mind. From maximizing revenue streams and securing new, dedicated revenue, to navigating constantly changing federal funding and financing opportunities, our capabilities lead to innovative, cost-effective procurement plans.

HOW WE CAN HELP

REVENUE BASED FUNDING

It's important to keep debt service levies in check to stay competitive for economic development while striving to improve infrastructure conditions. We can assist in developing right-sized solutions that leverage utility and economic revenues for long-term infrastructure and development initiatives.

CAPITAL IMPROVEMENT PLANS

Working alongside your staff, we'll systematically review all community projects, prioritize them, identify funding opportunities, and create a general timeline for completion. The result is a Capital Improvement Plan, which serves as a five to 10-year planning and fiscal management tool.

ASSESSMENTS

With an understanding of your community's unique needs and any established policies or precedents, we can help avoid potential assessment pitfalls, guide policy development, work with property owners, and propose creative solutions to achieve community objectives.

OUTSIDE FUNDING SOURCES

Continuous monitoring of federal, state, and local funding opportunities for infrastructure improvements is second nature to us. As regulations evolve and new constraints emerge, we collaborate to pioneer funding strategies that support the mission of each community's infrastructure planning and construction.

PUBLIC/PRIVATE PARTNERSHIPS

Relationships across public and private sectors can leverage nontraditional funding sources to overcome financial challenges. Partnerships often include a mix of city, state, and private entities. Extensive management is needed to guide stakeholders toward a win-win solution, which builds successful partnerships to spur economic development and improve infrastructure.
